About the St. Petersburg-Clearwater International Airport [PIE]

Centrally located between the metropolitan areas of Clearwater, St. Petersburg, Sarasota and Tampa, the St. Petersburg-Clearwater International Airport location provides many unique advantages. As one of the most popular travel destinations in the country, the St. Petersburg-Clearwater area attracts record-breaking visitors every year with its beautiful weather, gorgeous beaches, and excellent attractions. Plus, Orlando's world-famous theme parks are just 90 minutes away.

The Situation.

The airport team needed to update its existing Flight Information Display System [FIDS] to make it more intuitive for its personnel and travelers. The new FIDS would also need to be integrated with the airport's current Baggage Information Display System [BIDS] to track and display baggage information as pieces moved throughout the facility. The team also wanted a user-friendly system for managing and updating flight information on the backend of the system.

The Solution.

DataGlyphics worked directly with the airport team to build an entirely new FIDS. The result is a solution that's integrated seamlessly with the airport's existing BIDS and tracks and displays all flight and baggage information on monitors throughout the facility. The new FIDS also simplifies system maintenance by allowing users to login and add, delete or modify aircraft, airlines, cities, arrivals, departures and users. Security measures are built into the application. The system also generates automatic flight logs for all incoming and outgoing flights.
